A TANTÁRGY OKTATÁSÁNAK CÉLJA

The course aims to building the required capacities in sports coaches and instructors to help working-age adults to better cope with the challenges of everyday life - and especially in times of social crisis - by harnessing the positive impact of physical activity and sport on mental health.

The course is delivered in the form of a practice-oriented continuous professional development (CPD). It means that the course does not constitute an initial education, but it aims at coaches and instructors who already have undergone prior education.

The course is taught as a standalone capacity-building for continuous professional development. But it can be also linked or integrated into existing sport coaching or instructor education programmes to enrich these towards a more holistic approach.
